

Consulting Services

The entire corporate enterprise depends on your staff—the skilled technical team that keeps the information technology infrastructure running smoothly. Now as you implement or expand the usage of the INCONTROL products throughout your company, let us help...

Enterprise Builders Support Systems offers the depth of experience needed to support your current construction project.

MAXIMIZE THE RETURN ON YOUR INVESTMENT

Enterprise Builders is a BMC Software Consulting Partner specializing in the CONTROL-D Output Management and INCONTROL mainframe product lines. We provide **PROFESSIONAL SERVICES** on a project basis and product **EDUCATION**.

The INCONTROL products are flexible by design, adapting to the wide variety of data center environments. We help you realize more value from the products by creatively exploiting this flexibility. Our consultants listen to your needs and corporate culture to build solutions that are uniquely yours—while still being vendor supported.

Enterprise Builders consultants also educate your staff as we work alongside. Through both mentoring and formal education, we work to build up and strengthen your own pool of experts—an ongoing dividend to your company.

NEW CONSTRUCTION?

The footprint of an office tower is its foundation. The realization of today's dreams and the flexibility to make future changes depend on the strength and form of this base.

Enterprise Builders consultants look at your implementation in terms of your future aspirations as well as your current needs and resources. We will assist your staff to the extent you desire to design the right base and make the right architectural decisions from the start.

Planning and implementation involve providing answers to both the fundamental and the complex questions -

TOPOLOGY DESIGN *“Is it better to do report processing on a Windows server or the mainframe?” “What is the best configuration to balance the expected and future user load?” “How do we build the most resilient environment that spans multiple physical locations?”*

PARAMETER AND PROCESS CONFIGURATION *“What maintenance tasks and processes should be set up?” “How do we choose the best sizing and operational parameters now to accommodate future growth?” “Is there a way to interface with our current application infrastructure?”*

A SOLID SECURITY FOUNDATION *“How do we differentiate usage roles?” “What is the best way to interface between our existing security environment and the new product?” “How do we set up secure distributed product administration?”*

TEAR-DOWN?

The INCONTROL products are often purchased to replace an existing product or collection of internal tools. Like replacing a downtown high-rise without disrupting traffic flow and local businesses, it is critical to be able to keep your key operations running smoothly and to ensure the end result is a compatible fit with your environment.

Enterprise Builders consultants will assist you in making a secure, managed transition. We provide the expertise in running established conversions from other products or can design a new blueprint for migration from homegrown tools and processes.

RENOVATIONS?

Sooner or later, you'll need to change something about "the way it's always been". Whether you are rewiring a classic old house or expanding the plant to accommodate unexpected growth, you need a good plan and a trustworthy contractor.

Enterprise Builders consultants will help you to streamline processes that have become outdated, to deploy new features of the INCONTROL products, or to rework your entire environment to accommodate a large corporate change.

Your renovation needs may be brought on by the rollout of a new application or the acquisition of another company. We will work with both the technical staff and end user community to achieve the highest satisfaction from the new users of the products.

CONSTRUCTION APPRENTICESHIPS

Every project introduces change into the lives of your clients and staff, while the "relatively stable" moments between changes can be the best time to grow your skills to meet the next challenge.

Enterprise Builders consultants can deliver standard and custom training at your location—as part of a larger project or as a standalone offering. We also schedule public classes at customer sites, giving companies the opportunity to receive training for up to four people free of charge, in exchange for providing the physical and computing environment.

SUPPORTED PRODUCTS

The products supported by Enterprise Builders consultants are:

INCONTROL mainframe products

CONTROL-M and CONTROL-M/Restart
CONTROL-D and CONTROL-V
CONTROL-O
